

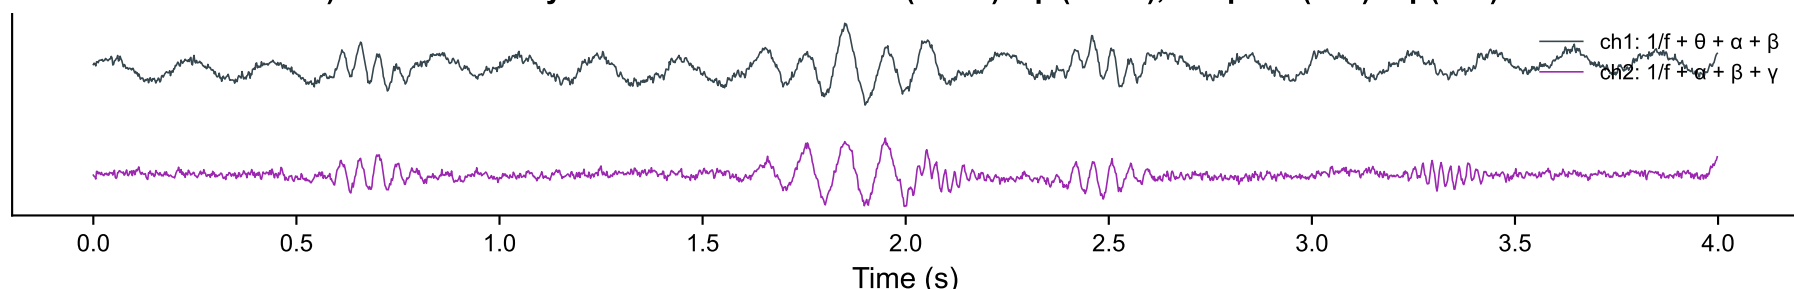

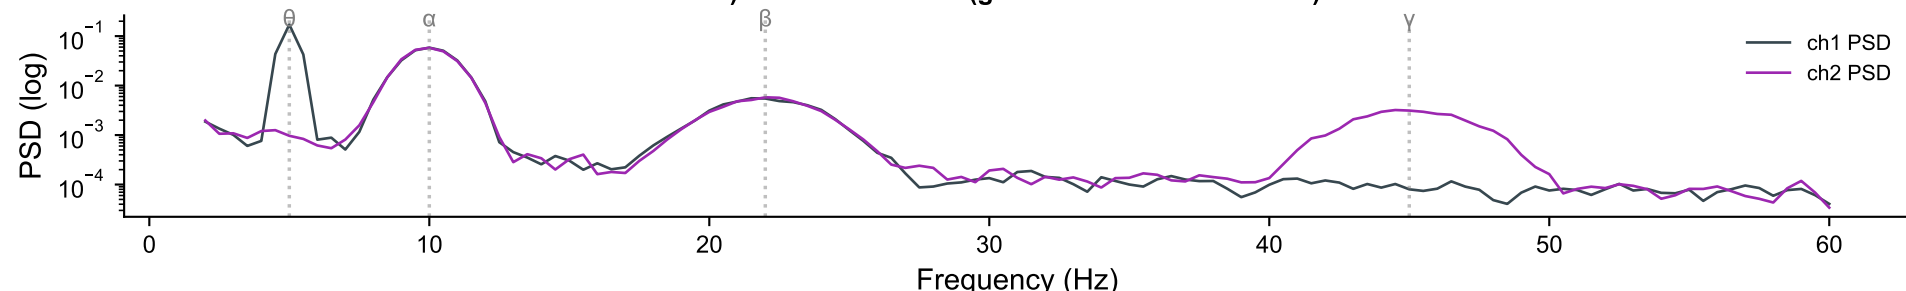

Figure 26 — Realistic multi-band EEG-pair: cross R(f) isolates shared α + β carriers

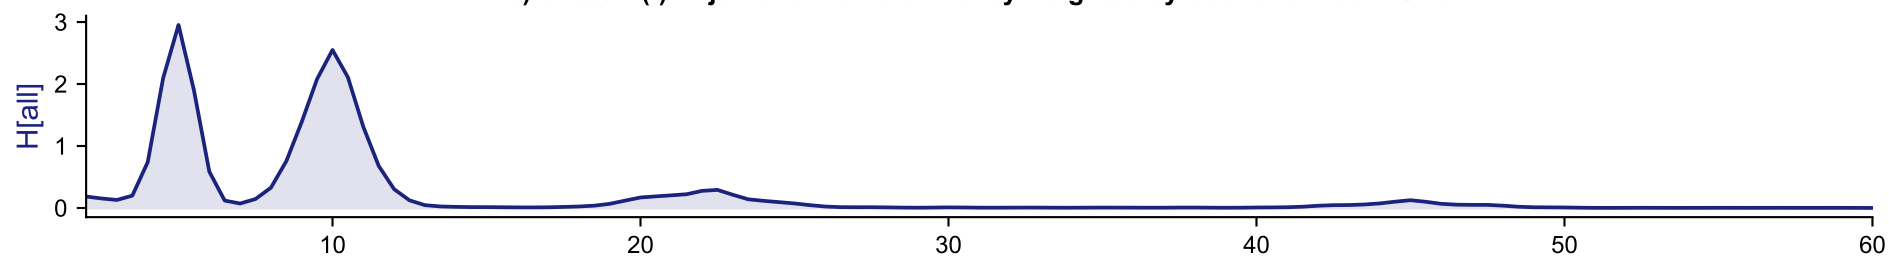

a) Two-channel synthetic EEG — shared α (10 Hz) + β (22 Hz), unique θ (ch1) + γ (ch2)

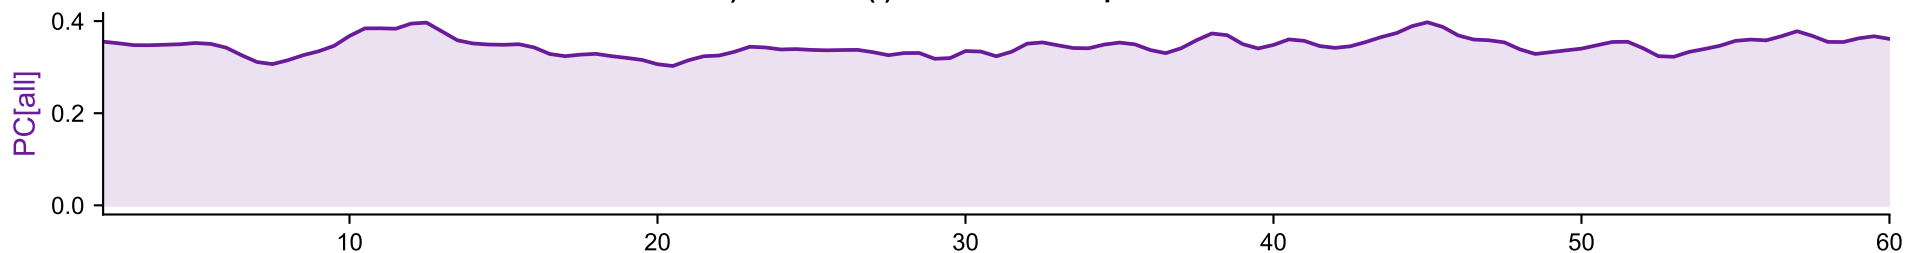

b) Per-channel PSD (ground truth band content)

c) Cross H(f) — joint harmonic similarity weighted by both channels' PSDs

d) Cross PC(f) — STFT cross-spectrum wPLI

e) Cross R(f) = H · PC — SHARED frequencies should dominate
